

I have grave concerns about your E911 requirement that will phase out analog cell phones. This is a critical issue for me as well as for other people who live remote as I do. I can use a bag cell phone (analog) and get a signal on my property, but when you disallow those, I will have to drive 15-20 min. or hike about 3-4 miles to use a regular cell phone. Apparently the FCC does not realize that having a cell phone that is E911 compliant but gets no signal is worse than having a usable analog cell phone that isn't E911 compliant.

That is, with my bag phone in an emergency I can call out.

With a regular phone that has E911, I won't get any signal, so in an emergency I'd just die, thanks to you, FCC.

Please recognize a bag (analog) cell phone is the only lifeline available to some of us. Do not take this from us.
